

# Protection of Intellectual Property

Do you need to identify intellectual property and its value in your company?

Are you interested in securing better protection of your intellectual property?

Do you have questions about employees' rights and obligations when it comes to intellectual property they created?

Does your competitor infringe your intellectual property?

Would you like to manage your intellectual property more efficiently?

## How we can help you

- Identify intellectual property and thus help increase your company's value.
- Register national, Community or international trademarks with the respective authorities.
- File oppositions against trademark registration in proceedings before the relevant authorities.
- Represent in disputes concerning infringements of trademarks, domain names, authors' rights, and other intellectual property rights, including preparation of legal actions and representation in court hearings, or legal assistance in negotiations with the counterparty leading to an out-of-court settlement.
- Draft licence and sub-licence agreements, including registration of licences with relevant authorities.
- Draft agreements on transfer of industrial property rights, including registration of these agreements with relevant authorities.
- Draft agreements on external acquisition of intellectual property rights, in particular software.
- Protect employee-generated intellectual property more efficiently by identifying existing risks and proposing effective solutions.
- Negotiate with collective administrators of authors' rights and related rights regarding payment of authors' fees.
- Realize Due Diligence of your company's intellectual property assets, in particular for the purposes of effective IP management or valuation of your company, e.g., in connection with M&A.
